Founder & Principal, Wisqora · 14+ years in banking, telecom & fintech systems

SYSTEMS TRUSTED AT

VodafoneZiggo · ABN AMRO · Knab Bank · SurePay · General Electric

Wisqora

THE STUDIO & THE FOUNDER

Somewhere in your business, a person is the integration between two systems.

That's the work Wisqora removes - the copy-paste between tools that never learned to talk, the weekly report rebuilt by hand, the onboarding email sent one at a time. We replace it with processes that run on their own, and we hand you the keys.

I spent 14+ years as a DevOps & cloud engineer inside **VodafoneZiggo**, **ABN AMRO**, **Knab Digital Bank**, **SurePay** and **General Electric** - hired to solve exactly this problem at enterprise scale, under banking-grade security and compliance. Wisqora brings that playbook to businesses that need the same leverage without the enterprise overhead.

14+	30%	€20K	60%
Years inside fintech, telecom, banking & healthcare systems	Faster releases after moving an enterprise estate to trunk-based delivery	Saved every month for one bank across 8 development teams	Faster incident detection after unifying hybrid-cloud monitoring

Proof before scope. We automate one real, expensive task in production and measure it before pricing the larger build.

You own everything. Every project ends with documentation, access and a runbook - the system runs without us.

Enterprise-grade by default. Security, encryption and compliance guardrails built the way regulated banks require them.

A lean model, on purpose. One accountable lead on every engagement, with vetted specialists brought in per project. No idle bench, honest scoping.

WHAT WISQORA BUILDS

Seven ways we take manual work off your plate

From a single automation to a full product or cloud platform - scoped honestly, built to run without us.

01 **Automation**

HOURS BACK, EVERY WEEK

Invoicing, onboarding emails, cross-system data transfer and recurring reports - the repetitive work, running on its own and measured.

02 **AI Agents**

TRAINED ON YOUR WORLD

Assistants and agentic workflows built on your own products, tone, rules and data - not a generic bot bolted onto your site.

03 **Website Development**

LAUNCHED, NOT JUST DESIGNED

Business sites, landing pages and CMS setups - with hosting, domains, SSL and SEO basics handled end to end.

04 **Web App Development**

DASHBOARDS & PORTALS

Customer portals, internal dashboards and SaaS products built in React, Next.js, Angular or Vue.

05 **Mobile App Development**

IOS & ANDROID, SHIPPED

React Native, Flutter or native Kotlin / Swift - with App Store and Play Store releases taken care of.

06 **Cloud Platforms**

BANKING-GRADE FOUNDATIONS

AWS and Azure architecture, Kubernetes, CI/CD and DevSecOps guardrails - the layer everything else runs on.

07 **Email Marketing**

FLOWS THAT CONVERT

Welcome sequences, lifecycle flows, newsletters, segmentation and deliverability - set up to run themselves.

THE ENGAGEMENT MODEL

Four steps. The first one is free.

No long discovery decks. We prove value in production first, then build around what already works.

01	02	03	04
Map	**Pilot**	**Ship**	**Hand over**
A call and a written map of where your team's hours go. You keep it either way. FREE	We automate one of your most expensive manual tasks in production - and measure it.	With the pilot proven, we build the remaining work around what we know already pays off.	Documentation, access and a runbook. The system runs without us - you own all of it.

THE ENTERPRISE TRACK RECORD

Where the Wisqora playbook was forged

'24-'25	**Senior DevOps Engineer** VodafoneZiggo · Netherlands' largest cable & telecom (17M customers)	60% faster incidents
'23-'24	**Senior DevOps Engineer** Knab Digital Bank (Aegon) · leading digital-first bank	20% cost saved
'21-'23	**Senior DevOps / Cloud Engineer** SurePay via Mobiquity · IBAN-name verification for EU banking	20% cost saved
'15-'21	**Cloud Engineer / Tech Lead** ABN AMRO Bank N.V. via TCS · 23M+ customers	€20K/mo saved
'12-'15	**Application / Mobile Developer** General Electric (Healthcare & Industrial) via TCS	

UNDER THE HOOD

The engineering behind the studio

CLOUD & INFRASTRUCTURE

AWS (EC2 · S3 · Lambda · EKS · ECS Fargate) | Azure AKS | Terraform | CloudFormation | Ansible | AWS CDK

CI/CD · CONTAINERS · OBSERVABILITY

GitLab CI/CD | Jenkins | Kubernetes | Docker | Helm | Prometheus | Grafana | Datadog | ELK

SECURITY & COMPLIANCE

HashiCorp Vault | KMS encryption | SonarQube | OWASP | SCPs | CloudTrail | Security Hub

PRODUCT & SCRIPTING

React | Next.js | Angular | Vue | React Native | Flutter | Kotlin / Swift | Python | Java | JavaScript

CERTIFICATIONS
